

How to set-up Two-Factor Authentication

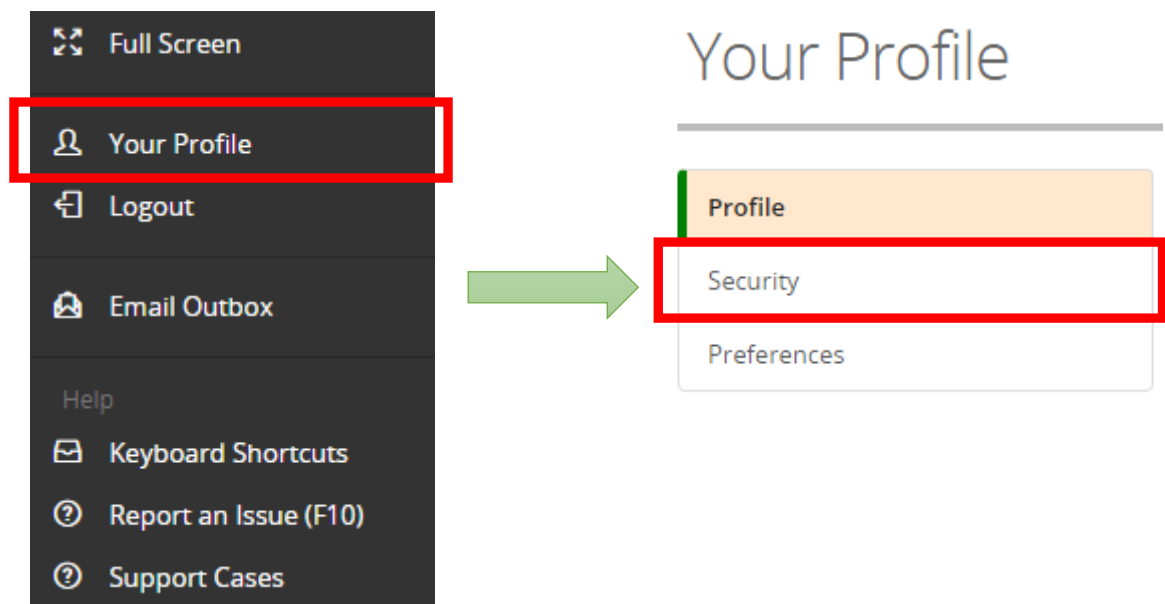

TradePeg Two-Factor Authentication

Customers can share a list of IP Addresses via the TradePeg Support team to be white listed from devices with static IP that require TradePeg Access without the need of two-factor authentication.

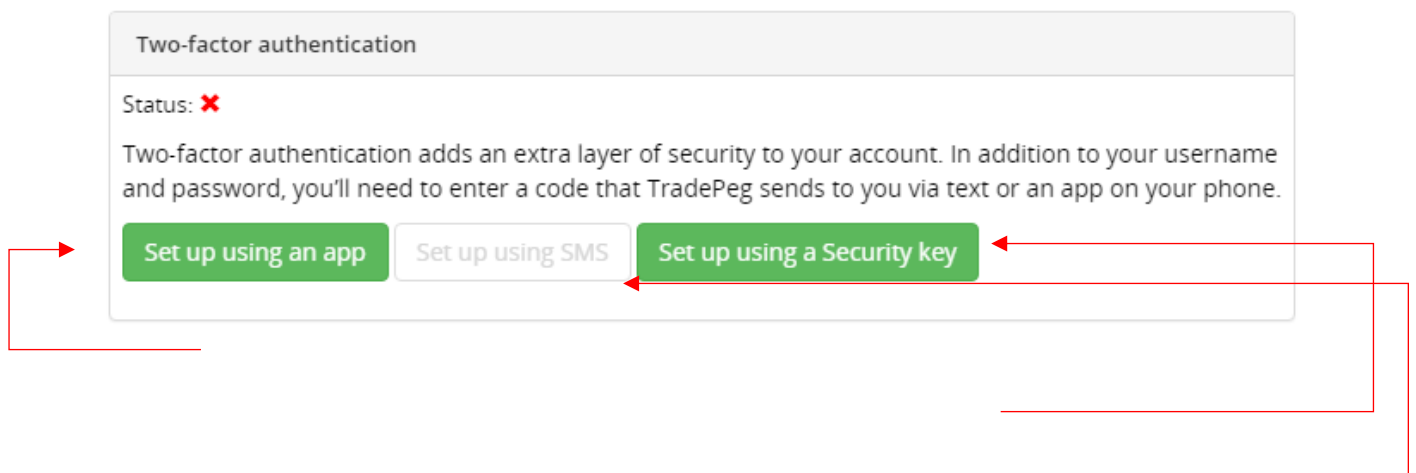

NOTE: If you are unsure if you have a static IP, discuss first with your internet provider/tech support.

Follow these steps to setup two-factor authentication:

Once logged in to the TradePeg system click on your user name on the top right hand screen and select “Your Profile” and then click on the “Security” tab in the Profile Page.

There are a few options available to authenticate:

Via the Authentication App, for example by using the Google Authenticator

Via the Security Key, for example: Yubico

Or via SMS

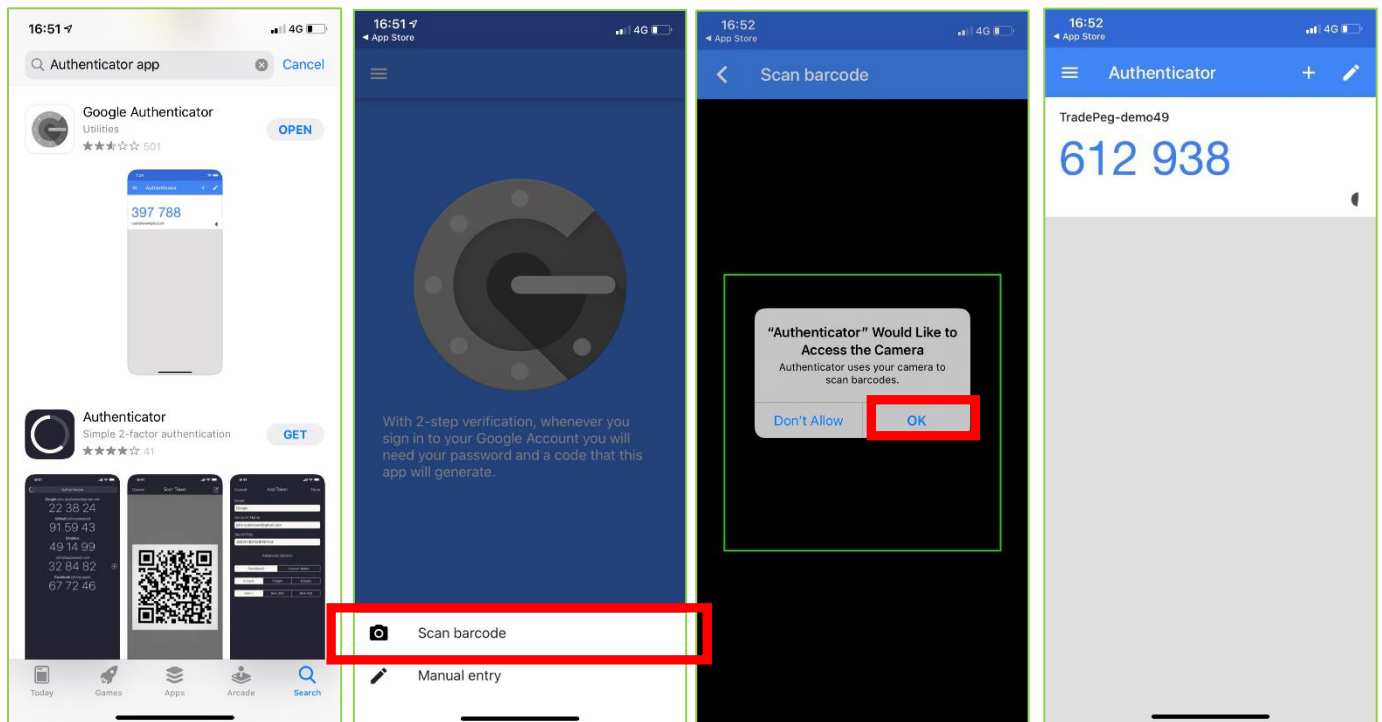

Authenticating via the app

Click on **Set up using an app** and download the Authenticator app on your mobile device.

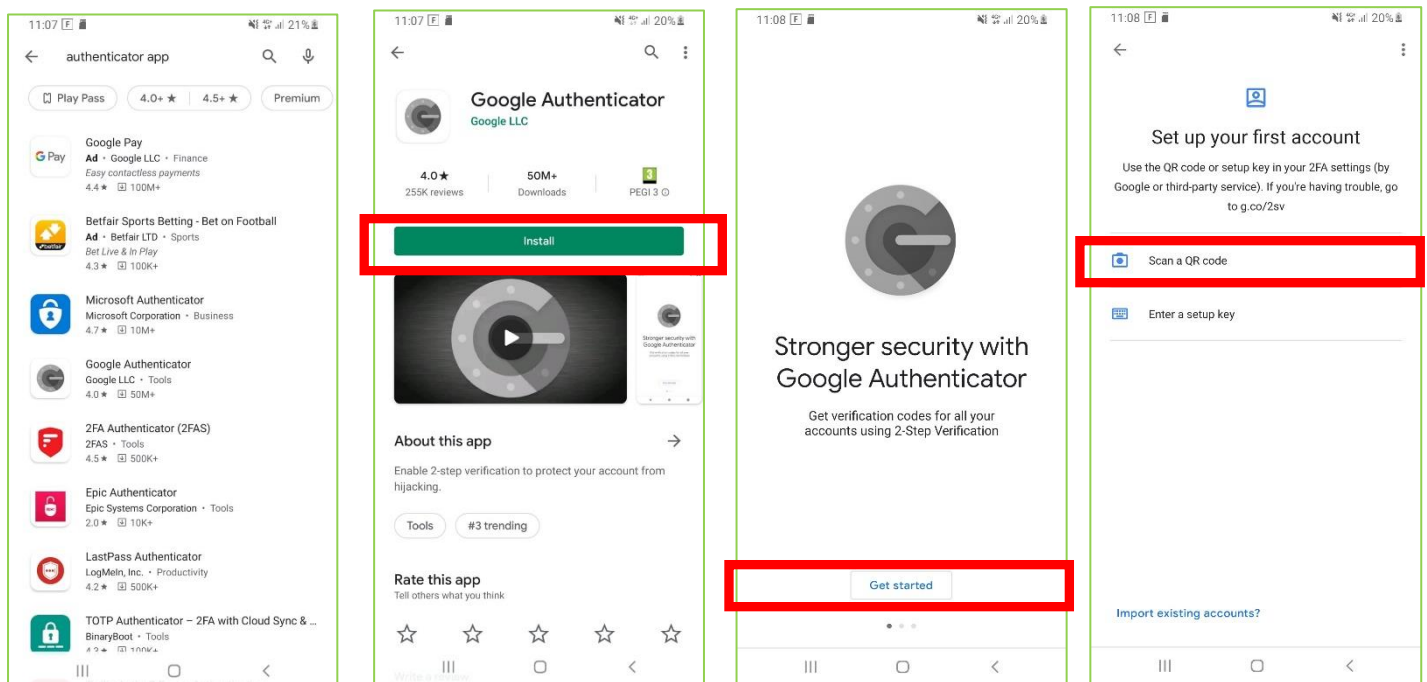

Search for Google Authenticator or any other Authenticator app once installed open the app and click on "Begin Setup" and follow these steps

App Store (Apple):

Play Store (Android):

The Authenticator App will request to authenticate by scanning a bar code, scan the QR code from the TradePeg Profile Security screen and enter the six digit code which will appear in the Authenticator App to complete the authentication process.

Profile
Security
Preferences

Enable two-factor authentication

1. Scan this barcode with your app.

Scan the image above with the two-factor authentication app on your phone.

2. Enter the six-digit code from the application

After scanning the barcode image, the app will display a six-digit code that you can enter below.

<input type="text"/>	✓ Continue
----------------------	------------

Once you are authenticated TradePeg will update the Status as active.

Two-factor authentication
Status: ✓
Deactivate Two-factor authentication

Sign in with two-factor authentication

If you try to sign into the tradepeg system **from outside whitelisted IP address**, or if you have been signed out from an authenticated device, or if you are trying to login on a separate device while logged in on another, it will require you to follow a two steps authentication:

1. Login with your user name and password
2. Open the Authenticator App to generate the 6 digit code (or use the code sent via SMS)
